Dear Don,

Solomon Colors "A", "H", "X" Series Concentrated Mortar Colors are pigments made primarily from synthetic iron oxides, which are 99% pure Fe₂O₃ & Fe₃O₄ fine particles. The synthetic iron oxides are derived from using over 80% content of scrap steel to produce the synthetic iron oxide pigments. In addition Solomon Colors, Inc. recycles 100% of dust collected during the manufacturing process. The recycled dust is then added to colors, which are blended together to produce a particular color shade.

Solomon Colors, Inc. manufacturing plants are located in Springfield IL and Rialto CA. Masonpro receives products manufactured at the Springfield IL plant.

Sincerely,

Richard R. Solomon
President
