

# Stone Lifting Pins

## PIN LEWIS

Stone lifting device to set stone.

Sold in Pairs

### Factory Recommendations:

“... the listed size of the pin lewis (eg. 7/8”) should be the hole size drilled to receive the pins. The pins are slightly undersize to fit in a standard hole – there should be no “slop” nor should it be necessary to drill an oversize hole to accommodate the pin.

“...should also be aware that a worn or incorrectly ground drill will often result in an undersized or misshapen hole. Using a new drill bit is recommended.”

“It is also important that the holes be drilled to a minimum depth to receive the full pin length (eg. a 7/8” pin lewis would need a 5” minimum depth hole). The full pin length must be fully set in the hole before any lifting is attempted.”

Trow and Holden Co.

### Sizes Available:

<u>Pin Size &amp; Length</u>	<u>Capacity</u>
<input type="checkbox"/> 1/2" x 3-1/2"	750 lbs
<input type="checkbox"/> 5/8" x 4"	1,500 lbs
<input type="checkbox"/> 3/4" x 4-1/2"	3,000 lbs
