Check out the Bennu Hydraulic Scaffold on Youtube; <https://www.youtube.com/watch?v=6oG9tQd23RA>

The Bennu Hydraulic Scaffold system is a marvel of construction innovation. The Scaffold system can rapidly speed up the speed of a project on a jobsite. Particularly suited to large projects the scaffolding can rise with the level work level. The ability to carry loads up to 26,000lbs

makes the scaffold efficient as it can descend for more materials and workers and rise again. It also allows the workers to work at a comfortable level on the outside of buildings compared to traditional scaffolding.

This Scaffolding system is perfect for Masons, Carpenters, Roofers, Steelworkers, Glaziers, Panel Installers etc.

There are 360ft of mast sections available. This sale includes three mobile platforms to rise and descend independent of each other. There are further extending assemblies that attach to create different set ups and L shapes for jobs as you need them. And the wheel assemblies help towing pieces into place. This scaffold is great for jobs with lots of materials or heavy materials are called for. The sale includes everything you need to get going with hydraulic scaffolding.

Buyer must organize transport.
